Tel: +44 (0) 1483 898125

# fischer ULTRACUT FBS II 8,10,12 and 14 zinc-plated steel

## The high-performance concrete screw for absolute installation ease

Unique saw-tooth geometry **cuts quickly into the concrete** – also in multiple use and reinforced concrete.

The ULTRACUT FBS II is available in different head designs. **Countersunk and hexagonal head** with and without internal torx drive.

Through the special thread geometry, the screw flanks cut deeply into the concrete and allow **higher loads**. This **saves costs** because less anchor points and smaller base plates are required.

The approved adjustment for the concrete screws allows the screw to be unscrewed twice for a total length of 20 mm, to place maximum 10 mm **packing below the base plate head or to align the attached part, and then to tighten the screw again.**

The short ULTRACUT FBS II, with a reduced embedment depth, allows for **a short drill hole depth, fast installation and less reinforcement hits** which makes it an efficient choice for many applications.

The ribs under the head prevent accidental loosening of the anchor making the system **more secure**.

## Functionality

- The ULTRACUT FBS II is recommended for the push-through installation.
- The screw is installed correctly when the screw head sits flush on the fixture and cannot be screwed in deeper (visual setting control).
- Drill holes do not need to be cleaned during vertical installation (ceiling and floor). For floor fixings the hole must be drilled 3x drill hole diameter deeper.
- We recommend using a tangential impact screwdriver with a suitable impact screwdriver socket or an internal torx drive.
- The assessment document also covers the use of hollow drills with automatic drill hole cleaning and the use of diamond drilling holes.

### Your advantages at a glance

- With up to 3 embedment depths, the ULTRACUT FBS II allows for the same screw to be used for different component thicknesses.
- Expansion-free anchoring (undercut) allows for lowest edge- and axial spacings.
- The assessment (ETA Option 1) covers the use of single-point anchors in cracked and non-cracked concrete.
- The performance categories seismic C1 and C2 ensures that the strictest of safety standards and earthquake specifications can be fulfilled.
- The countersunk head is suitable for visually appealing installations.
- The checking gauge allows for reuse in temporary fixings (e.g. inclined supports) covered by the approval.

[www.rjfacades.com](http://www.rjfacades.com)  
Tel: +44 (0) 1483 898125

## Installation

Fixture adjustment

Annular gap filling, e.g. for seismic

## Reusability

**Temporary fixings and reusability in green concrete according to Z-21.8 - 2049** (valid for diameter 8 – 14, also in low-strength concrete).

The checking gauge must be pushed over the thread of the ULTRACUT FBS II every time before installation. As soon as the screw end protrudes through the sleeve, the thread is too worn and is no longer approved for use. The concrete screw must always be checked for visible damage (e.g. corrosion) and replaced, if necessary.

The checking gauge, available separately, allows the outer diameter of the thread to be checked prior to the screw being reused; this complies with **the approval for multiple use.**

# fischer ULTRACUT FBS II 8, 10 and 12 A4 stainless steel

## The high-performance concrete screw for absolute installation ease in outdoor areas

Unique saw-tooth geometry **cuts quickly into the concrete – also in reinforced concrete.**

**The three embedment depths**, allow for using the ULTRACUT FBS II A4 in many different applications and **enable a high flexibility.**

The approved adjustment for the concrete screws allows the screw to be unscrewed twice for a total length of 20 mm, to place maximum 10 mm **packing below the base plates or to align the attached part, and then to tighten the screw again.**

Countersunk design allows a **flush installation.**

The short ULTRACUT FBS II A4, with a reduced embedment in depth, allows for a **short drill hole depth, fast installation and less reinforcement hits.**

The ribs under the head prevent accidental loosening of the anchor making the system **more secure.**

## Functionality

- The ULTRACUT FBS II A4 is recommended for the push-through installation.
- The screw is installed correctly when the screw head sits flush on the fixture and cannot be screwed in deeper (visual setting control).
- Drill holes do not need to be cleaned during vertical installation (ceiling and floor). For floor fixings the hole must be drilled 3x drill hole diameter deeper.
- We recommend using a tangential impact screwdriver with a suitable impact screwdriver socket or an internal torx drive.

### Your advantages at a glance

- The specially hardened red tip provides faster and more secure installation.
- The stainless steel concrete screw guarantees a high level of corrosion resistance especially for wet conditions and in outdoor areas.
- The performance categories seismic C1 and C2 ensure that the strictest of safety standards are fulfilled (also for high earthquake specifications).
- The concrete screw ULTRACUT FBS II A4 can also be used in masonry.
- Using diamant and hollow drills the concrete screw ULTRACUT FBS II offers a fast and secure fixing.

## Approvals

## Building materials

# fischer ULTRACUT FBS II 6 zinc-plated steel

## The high-performance concrete screw for absolute installation ease

### Concrete screw ULTRACUT FBS II 6 SK

The special double angle on the under-head geometry increases the stability of the concrete screw during screwing in.

Different head designs offer a **maximum of flexibility and a perfect adaptation** to the application.

### Concrete screw ULTRACUT FBS II 6 P / LP

The design of the concrete screw with panhead and large panhead allows for aesthetic installation.

### Concrete screw ULTRACUT FBS II 6 US

The special head geometry for use in mounting rails with a socket (SW10) enables simple installation of the add-on part.

### Concrete screw ULTRACUT FBS II 6 M8 or M10

The hanger bolt enables the easy and suitable application of pipe clamps and connecting elements.

### Concrete screw ULTRACUT FBS II 6 M8/M10 I

The design of the concrete screw with step thread offers maximum flexibility when mounting threaded rods or connecting elements.

## Functionality

- The ULTRACUT FBS II 6 is recommended for the push-through and pre-positioned installation.
- We recommend using a tangential impact screwdriver with a suitable impact screwdriver socket or an internal torx drive.
- Drill holes do not need to be cleaned during vertical installation (ceiling and floor). For floor fixing the hole must be drilled 3x drill hole diameter deeper.
- The screw is installed correctly when the screw head sits flush on the fixture and cannot be screwed in deeper (visual setting control).

## Your advantages at a glance

- The special ratio between flank and shaft diameter allows for a deep and fast cutting into the concrete.
- The ETA assessment option 1 includes the use in cracked and non-cracked concrete for highest safety requirements.
- The ULTRACUT FBS II 6 is approved for multiple use of non-load bearing systems and thereby ideal for the installation of pipe routes, cable trays and prestressed hollow concrete ceilings.
- The first diameter 6 mm concrete screw with an ETA assessment for the C1 seismic performance category for additional safety standards.
- The approved adjustment for the concrete screws allows the screw to be unscrewed twice for a total length of 20 mm, to place maximum 10 mm packing below the screw head or to align the attached part, and then to tighten the screw again.

www.rjfacades.com  
Tel: +44 (0) 1483 898125

## Installation

## Variable embedment depths - Enables a flexible adaptation to the loads

- 1** Fast installation due to minimum embedment depth  
e.g. FBS II 6x60/5 US

**Minimum embedment depth** is 40 mm

Permissible tensile load at  $h_{nom, min}$  40 mm is 1,2 kN

Permissible shear load at  $h_{nom, min}$  40 mm is 4,3 kN
- 2** Maximum load due to maximum embedment depth  
e.g. FBS II 6x60/5 US

**Minimum embedment depth** is 55 mm

Permissible tensile load at  $h_{nom, max}$  55 mm is 2,4 kN

Permissible shear load at  $h_{nom, max}$  55 mm is 6,3 kN

## Approvals

## Building materials

# Applications

fischer ULTRACUT FBS II 8,10,12 and 14 zinc-plated steel

## Metal construction

### Railings

e. g. ULTRACUT FBS II 10x95 SK

- For maximum loads and minimal edge and axial spacings in cracked concrete.

### Shelving systems

e. g. ULTRACUT FBS II 14x125 US

- For the anchoring of impact protection for high shear forces.

### Brackets / base plates

e. g. ULTRACUT FBS II 12x110 US

- For maximum loads in cracked concrete.

## Timber work

### Step/rise anchorage

e. g. ULTRACUT FBS II 10x230 US + washer

- Ideal for very large fixing thicknesses.
- Ideal for adjustment after installation.

### Beam anchorage

e. g. ULTRACUT FBS II 10x200 US + washer

- For the perfect transmission of force between the screw and the step / beam.

## fischer ULTRACUT FBS II 8,10,12 and 14 zinc-plated steel

### Formwork construction / site facilities

#### Inclined supports

e. g. ULTRACUT FBS II 14x125 US

- Reuseable
- For the temporary anchoring of inclined supports or formwork props.

#### Site facilities in tunnels

e. g. ULTRACUT FBS II 10x120 US

- Reuseable
- For the temporary anchoring of supply lines in tunnels.

### Sanitary / heating / electrics

#### Pipelines

e. g. ULTRACUT FBS II 10x90 US

- For the anchoring of heavy pipelines.

#### Cable trays

e. g. ULTRACUT FBS II 8x70 US

- For fast anchoring in a push through installation method.
- For maximum loads with fire approval.

#### Air conditioner

e. g. ULTRACUT FBS II 8x90 US TX

- Version with integral washer and additional internal torx drive for a perfect installation with tight mounting rails.

#### Diamond drill

e. g. ULTRACUT FBS II 12x150 US

- Fixing of diamond drill machines.

# Applications

fischer ULTRACUT FBS II 8, 10 and 12 A4 stainless steel

## Metal construction and outdoor applications

### Railings

e. g. ULTRACUT FBS II 10x120 US A4

- For maximum loads and minimum edge/axial spacing in cracked concrete.

### Brackets / base plates

e. g. ULTRACUT FBS II 12x110 US A4

- For maximum loads in cracked and non-cracked concrete in wet conditions.

### Canopies

e. g. ULTRACUT FBS II 12x130 US A4

- For anchoring in wet conditions.

### Stadium seating anchoring

e. g. ULTRACUT FBS II 10x120 US A4

- Perfect solution for seating anchoring in outdoor areas.

### Balcony railings

e. g. ULTRACUT FBS II 10x95 SK A4

- Secure and corrosion-resistant anchoring with the concrete screw ULTRACUT FBS II A4.

### Column footing

e. g. ULTRACUT FBS II 10x100 SK A4

- Visually sophisticated installation in outdoor areas with the countersunk head.

## fischer ULTRACUT FBS II 6 zinc-plated steel

### Sanitary, heating and electrical industry

#### Mounting channels

e. g. ULTRACUT FBS II 6x40 P

- Suited for the installation of mounting channels for anchoring pipelines or pipe trays.

#### Suspended mounting channels

e. g. ULTRACUT FBS II 6x55 M8/19

- With the aid of the M8/M10 hanger bolt, multiple and individual suspensions of e.g. ventilation ducts, pipelines and sprinkler systems can be installed.

#### Perforated tapes

e. g. ULTRACUT FBS II 6x40 LP

- With the help of the panhead version, different perforated tapes can be installed quickly and easily indoors.

#### Prestressed hollow concrete ceilings

e. g. ULTRACUT FBS II 6x35 M8/M10 I

- From a mirror web thickness of 25 mm, pipes or air conditioners can be installed on prestressed hollow ceiling concrete.

1) Suitable for FMB T40 Maxx Bit

2) Suitable for FPB Profi-Bit T50 5/16"

## Filling disc for ULTRACUT FBS II / FBS II A4

By using the backfilling disc, a backlash, e.g. in the case of shear forces, can be ruled out. For this purpose, the filling disc is placed on the concrete screw before installation (recess to the component).

In the next step, the FBS II is screwed in until the filling disc rests against the anchor plate. Now the filling with one of the injection mortars FIS HB, FIS V, FIS SB or FIS EM Plus can be carried out through the lateral bore using the filling aid. The filling quantity depends on the thickness of the anchor plate and the size of the annular gap.

Typical fields of application

- Brackets
- Earthquake-approved anchorings

# Installation parameters and loads

## Installation parameters concrete C 20/25 - C50/60

ULTRACUT FBS II Concrete screw						Type US	Type SK
Drill hole diameter [mm]	$d_o$	8	10	12	14		
Nominal screw-in depth $h_{nom}$ [mm]	$h_{nom1}$	50	55	60	65		
	$h_{nom2}$	-	65	75	85		
	$h_{nom3}$	65	85	100	115		
Drill hole depth (push-through installation) [mm]	$h_2 \geq$	$l + 10$	$l + 10$	$l + 10$	$l + 15$		
Clearance hole diameter [mm]	$d_f$	10,6 - 12	12,8 - 14	14,8 - 16	16,9 - 18		
Maximum torque for installation with impact screw driver in concrete	$T_{imp, max}$	600	650	650	650		
Width across flat	SW	13	15	17	21		
Drive	TX	40 (SK u. US)	TX 50 (SK)	-	-		

## Installation parameters masonry

Concrete screw ULTRACUT FBS II 8-14					
Base material	Compressive strength class [N/mm <sup>2</sup> ]	Size	[mm]	8	10
		$h_{nom}$	[mm]	65	85
Solid clay brick (EN771-1)	$\geq 12$	$T_{inst}$	[Nm]	10	10
Solid sand-lime brick (EN771-2)	$\geq 12$	$T_{inst}$	[Nm]	15	15
Aerated concrete (EN771-4)	$\geq 6$	$T_{inst}$	[Nm]	5	10

## Installation of concrete screws (use a cordless or cabled impact wrench)

Concrete Screw ULTRACUT FBS II 8-14	Recommended nominal torque of the tangential impact wrench zinc-plated steel*)	Recommended nominal torque wrench of the tangential impact wrench A4*)
	[Nm]	[Nm]
FBS 8	600	450
FBS 10	650	450
FBS 12	650	650
FBS 14	650	-

\*) The values apply to concrete strength of approx. 40N/mm<sup>2</sup>, for other concrete strength classes the values may differ.  
The conversion of nominal output into effective tightening torque varies from machine to machine - always therefore use torque control.

# Loads

## Concrete screw ULTRACUT FBS II zinc plated steel

For the design the complete assessment ETA-15/0352 has to be considered.<sup>9)</sup>

- 1) The partial safety factors for material resistance as regulated in the ETA-15/0352 as well as a partial safety factor for load actions of  $\gamma_L = 1,4$  are considered. As a single anchor counts e.g. an anchor with a spacing  $s \geq 3 \cdot h_{ef}$  and an edge distance  $c \geq 1,5 \cdot h_{ef}$ . Accurate data see ETA-15/0352.
- 2) For higher concrete strength classes up to C50/60 higher permissible loads may be possible.
- 3) Drill method hammer drilling resp. hollow drilling. For further allowable drill methods see ETA-15/0352.
- 4) The anchorage depths smaller than 40 mm are only allowed for single anchors as part of a multiple fixing of non-structural systems.
- 5) Diamond drilling not permitted.
- 6) Maximum allowable torque for installation with any tangential impact screw driver.
- 7) For combinations of tensile loads and shear loads or for shear loads with lever arm (bending moments) as well as reduced edge distances or spacings (anchor groups) we recommend to use our anchor design software C-FIX.
- 8) Minimum possible axial spacings resp. edge distance while reducing the permissible load.
- 9) The given loads refer to the European Technical Assessment ETA-15/0352, issue date 30/10/2018. Design of the loads according ETAG 001, Annex C, Method A (for static resp. quasi-static loads).
- 10) A reinforcement in the concrete to prevent splitting is required. The width of the cracks has to be limited under consideration of the splitting forces at  $w_k \sim 0,3$  mm.

<b>FBS II 10x65</b>	A4	120	65	450	2,9	6,2	40	115	155	40	40
<b>FBS II 10x85</b>	A4	140	85	450	7,6	19,2	75	360	205	40	40

For the design the complete assessment ETA-17/0740 has to be considered. 7)

- 1) The partial safety factors for material resistance as regulated in the ETA-17/0740 as well as a partial safety factor for load actions of  $\gamma_F = 1,4$  are considered. As a single anchor counts e.g. an anchor with a spacing  $s \geq 3 \cdot h_{ef}$  and an edge distance  $c \geq 1,5 \cdot h_{ef}$ . Accurate data see ETA-17/0740.
- 2) For higher concrete strength classes up to C50/60 higher permissible loads may be possible.
- 3) Drill method hammer drilling. For further allowable drill methods see ETA-17/0740.
- 4) Maximum allowable torque for installation with any tangential impact screw driver.
- 5) For combinations of tensile loads and shear loads or for shear loads with lever arm (bending moments) as well as reduced edge distances or spacings (anchor groups) we recommend to use our anchor design software C-FIX.
- 6) Minimum possible axial spacings resp. edge distance while reducing the permissible load.
- 7) The given loads refer to the European Technical Assessment ETA-17/0740, issue date 23/10/2018. Design of the loads according TR055/ETAG 001, Annex C, Method A (for static resp. quasi-static loads).
- 8) A reinforcement in the concrete to prevent splitting is required. The width of the cracks has to be limited under consideration of the splitting forces at  $w_k \sim 0,3$  mm.

## Concrete screw ULTRACUT FBS II 8-14

### Highest recommended loads <sup>1) 3)</sup> for a single anchor, resp. a fixing point <sup>4) 5) 6)</sup> in solid brick masonry.

Base material	Compressive strength [N/mm <sup>2</sup> ]	Type	ULTRACUT		
		Size		FBS II 8	FBS II 10
		Anchoring depth h <sub>nom</sub>	[mm]	65	85
Solid clay brick <sup>9)</sup> (EN771-1) ≥ 240x113x115 mm	≥ 12	F <sub>rec</sub> <sup>2)3)</sup>	[kN]	1,1	1,4
	≥ 20	F <sub>rec</sub> <sup>2)3)7)</sup>	[kN]	1,6	1,6
Solid sand-lime brick <sup>9)</sup> (EN771-2) ≥ 240x71x115 mm	≥ 12	F <sub>rec</sub> <sup>2)3)7)</sup>	[kN]	1,2	1,2
	≥ 20	F <sub>rec</sub> <sup>2)3)7)</sup>	[kN]	1,2	1,2
Aerated concrete (EN771-4) ≥ 499x249x120 mm	≥ 6	F <sub>rec</sub> <sup>2)3)</sup>	[kN]	0,7	0,9
Minimum spacing within anchor groups of 2 or 4 anchors		s <sub>min</sub>	[mm]	80	
Minimum spacing between single anchors, resp. anchor groups		s <sub>min</sub>	[mm]	80	
Minimum distance to the horizontal joint		c <sub>min,v</sub> <sup>8)</sup>	[mm]	20	
Minimum distance to the vertical joint		c <sub>min,h</sub> <sup>8)</sup>	[mm]	40	
Minimum distance to the free edge		c <sub>min,free edge</sub> <sup>8)</sup>	[mm]	200	
Tightening torque <sup>10)</sup>	Solid clay brick <sup>9)</sup>	Tighten	[Nm]	10	
	Solid sandlime brick <sup>9)</sup>			15	
	Aerated concrete			5	

1) An appropriate safety factor is considered.

2) The given loads apply to the given brick measures for masonry with superimposed load. Bigger brick sizes are minimum equal in case of the loads.

3) The loads only apply to multiple fixings of non-load-bearing systems and are valid for tensile load, shear load and oblique load under any angle.

4) On-site screw testing is recommended to validate technical data. If the joints are not visible 100% anchor testing is recommended due to the screws are only working in the bricks and not in the mortar joints.

5) A fixing point can be a single anchor, 2 anchors or 4 anchors with a minimum spacing s<sub>min</sub>. Anchor groups of 4 anchors are arranged in rectangular disposition.

6) The fixing points have to be arranged in this way that there will be always maximum one fixing point arranged in one brick.

7) Brick pull-out is decisive.

8) The values c<sub>min,v</sub> and c<sub>min,h</sub> are only valid if the mortar joints are filled proper. Otherwise the joints has to be considered as free edges and c<sub>min,free</sub> is decisive. Minimum mortar strenght is M2.5

9) The values are valid for unperforated solid bricks.

10) The screw is screwed in with a cordless screwdriver, an impact screwdriver or by hand. The screwing process must be finished immediately when the screw head is in contact with the assembled object. The specified tightening torque must then be applied with a torque wrench.

## Concrete screw ULTRACUT FBS II 6 zinc plated steel

### Highest permissible loads for a single anchor <sup>1)</sup> for multiple use for non-structural applications in cracked concrete C20/25 to C50/60.

Type	Material fixing element	Screw-in depth	Min. member thickness	Installation torque	Permissible tensile load	Permissible shear load	Required edge distance (with one edge) for		Required spacing for	Min. spacing	Min. edge distance

For the design the complete assessment ETA-18/0242, issued 30.10.2018 has to be considered.

- 1) The required partial safety factors for material resistance as well as a partial safety factor for load actions of  $\gamma_L = 1,4$  are considered.
- 2) Minimum possible axial spacings resp. edge distance. For further measures see assessment.
- 3) Valid for tensile load, shear load and oblique load under any angle.
- 4) Concrete strength class C30/37 up to C50/60.

# fischer FIXPERIENCE

## The design and information software suite

- The modular design program includes engineering software and application modules.
- The software is based on international design standards (ETAG 001, EC1, EC2, EC3 and EC5), including the national application documents. All common force and measurement units are available.
- Incorrect input will be recognized and the software gives tips to get a correct result. This ensures a safe and reliable design every time.
- The graphical display can easily be rotated through 360°, panned, tilted or zoomed as required.
- The 3D display gives a detailed and realistic image.
- The "live update" feature helps to keep the program up to date ensuring you are always working with the latest version.
- Free download and updates at [www.fischer.de/fixperience-en](http://www.fischer.de/fixperience-en)

## Our service to you

We are available to you at any time as a reliable partner to offer technical support and advice:

- Our products range from chemical resin systems to steel anchors through to nylon anchors.
- Competence and innovation through own research, development and production.
- Global presence and active sales service in over 100 countries.
- Qualified technical consulting for economical and compliant fastening solutions. Also on-site at the construction site if requested.
- Training sessions, some with accreditation, at your premises or at the fischer academy.
- Design and construction software for demanding applications.
